

BREW CAVE

BY U.S. COOLER

COMMERCIAL GRADE BEER COOLER

The Brew Cave, commercial grade residential beer cooler, offers an abundance of cold storage space for beer, soda or any cold beverage. It can store over 30 cases of beer and 4 kegs, all while keeping them cold and ready to drink. The Brew Cave fits perfectly in your basement or garage utilizing the coldest storage space possible. Everything needed for the ultimate kegerator is included; walk-in cooler, refrigeration, shelving and draft beer dispensing system. The only thing you need is the beer!

Brew Cave kit includes:

Walk-in Cooler: 6'10" x 4'10" x 7'6" without a floor, lockable glass door with LED lights and heated glass.

Shelving:

Shelving fits the back and two side walls, 4 shelves for each wall.

Refrigeration System:

Pre-assembled outside refrigeration system, medium temperature, 1 phase, 3/4 horsepower, hermetic 208/230 volt, includes Copeland condensing unit. Other refrigeration systems are available.

Draft Beer Dispensing System:

Aluminum CO2 tank (empty), keg coupler, double gauge CO2 regulator, chrome faucet head, faucet knob, 5" shank, beer line with connectors, air line with clamps, tap soother faucet cap, 6" wall mount drip tray (stainless steel with drain), drip tray dimensions: 11"H, 6"W, 4 3/4"D. Multiple faucet kits available.

Brew Walls

For the craft brewery, a brew wall where your fans can enjoy a pint of your freshest brew is almost mandatory. Our walk-in coolers for brew walls provide the perfect solution to keeping your beer ice cold. Beer taps can be affixed to the side of the cooler, or can be dispensed from a remote bar area.

Growler Houses

Brewery tap houses with growler filling stations are a growing trend. Make it easy for your customers to head home with a growler of their favorite brew. Installing a station will keep your fans coming back again and again to refill their growlers with beer that has that fresh-from-the-keg taste.

The Growler House by Brew Cave[®] makes all this possible by storing all the kegs necessary in a refrigerated environment. The kegs can be kept in individual compartments in an under-counter refrigerator or housed in a back room walk-in cooler.
